ParishSOFT Family Suite

Resolved Issues

Family Directory

Fixed: Expanded Version of Sacraments Report Incorrectly Prints Mother's Last Name

Previously for records linked to the mother's member record, the expanded version of all sacrament reports printed the mother's last name instead of the maiden name. We corrected this issue. For all records, the expanded version of all sacrament reports now print the mother's maiden name.

Fixed: Fuzzy Searches for States in the Family List Return Unexpected Results

Previously when the user conducted a fuzzy search in the Family List for the name of a state, the results included text strings in every field that contained the state's two-letter abbreviation. For example, a search for "Delaware", returned values in every field that contained the string "de" (Delaware's two-letter abbreviation). We fixed this issue. Fuzzy searches for a state now return results for the selected search fields only.

Offering

Fixed: Contribution Counts and Contribution Totals Inconsistent Across Offering Reports

Previously for the same user-specified time period, contribution counts and contribution total amounts—which should have been the same—were different in the following reports:

- **Contribution Summary**
- **Contribution Dollar Range**
- **Contribution Posting**

These reports now display the same counts and contribution totals when the same date range is specified in each report setup.

IQ

Fixed: Queries Containing the Members > Date of Death Column Sometimes Missing Records

Previously, queries that contained the **Members > Date of Death** column as a condition were sometimes missing records in the result set. We determined that these queries excluded records with a date of death entered by a parish different from the one running the query. We fixed this issue. Now, queries that include the date of death as a condition correctly return all records meeting the query conditions—even if the date of death was entered by a different organization.

Fixed: Student Contact Info and Leader Contact Info Columns Pulling Old Data

Previously, the **Student Contact Info** and **Leader Contact Info** columns in the **Religious Education** group pulled data from the wrong database fields, so the result set sometimes displayed old information. We fixed this issue. Queries that include these columns now return current contact information.

Tuition

Fixed: Number of Payments Due Occasionally Miscalculated for New Invoices

Previously, when the **Include payment plan on invoice** option was enabled for new invoices, the system sometimes incorrectly calculated both the installment amount and the number of payments due. We resolved this issue.

Fixed: Discounts and Down Payments Cause Miscalculation of Number of Payments Due

Previously when a discount or down payment was applied to an invoice, the system ignored the amount. As a result, the calculation of the number of payments due was incorrect. We fixed this issue. When an invoice includes a discount or a down payment, the system now considers the amount when determining the number of payments required.

What's New

Census

Registration Status Options Added to Parish Directory Report

As shown in the following illustration, the setup for the Parish Directory report now features a new filter group called **Registration Status**:

Select options in this group to generate a Parish Directory report that includes registered families only, non-registered families only, or both registered and non-registered families.

Contacting ParishSOFT
